DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles R. Figer, Jr. (Registration No. 62,518) on August 12, 2010.

The application has been amended as follows:

In The Claims

13. (Currently Amended) A system for the prediction and optimization of a communications system comprising:

a hardware prediction module, wherein the hardware prediction module predicts the performance of at least one channel in the communications system by providing a characterization of at least one parameter of a plurality of parameters that describes the at least one channel, wherein the plurality of parameters includes a service type and bit error rate provided by a service provider; and wherein the hardware prediction module creates at least one transfer function model of the at least one channel such that the at least one transfer function model is simulated using physical configuration information of the communications system provided by the service provider;

Art Unit: 2472

[[an]] a hardware optimization module, wherein the hardware optimization module finds the optimum characterization for the at least one channel based on at least one design criteria; and

a line plant simulator, wherein the line plant simulator provides feasibility results based on the optimum characterization.

Allowable Subject Matter

Claims 1-2, 4, 6-19, 30-31, 33, and 35-44 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest predicting a performance of at least one of the plurality of channels using a plurality of parameters to characterize the performance of the at least one of the plurality of channels, wherein the parameters include a service type and bit error rate provided by a service provider; creating at least one transfer function model of the at least one of the plurality of channels, wherein the at least one transfer function model is simulated

Art Unit: 2472

using physical configuration information of the communications system provided by the service provider; and optimizing the parameters of at least one of the plurality of channels in order to improve a bit rate of the at least one of the plurality of channels in the communications system, wherein the optimizing uses an optimization module of a spectrum management system, as specified in independent claims 1, 13, and 30.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Verbin et al (US Patent No. 6,520,744 B1) discloses method and apparatus for improving performance of a splitter-less ADSL.
